There are 1z0-1116-23 free training demo for you to be downloaded, We always adhere to the principle that provides our customers best quality vce dumps with most comprehensive service.

NEW QUESTION: 1A tab control containing one page is instantiated when a window is opened. Which of the following methods will most efficiently add tab pages with potentially different content?**A.** OpenUserObject**B.** OpenUserObjectWithParm**C.** CreatePage**D.** OpenTab**Answer: D**

NEW QUESTION: 2Sie erstellen ein Azure Migrate-Projekt mit dem Namen TestMig in einer Ressourcengruppe mit dem Namen test-migration.Sie müssen ermitteln, welche lokalen virtuellen Maschinen für die Migration bewertet werden sollen.Welche drei Aktionen sollten Sie nacheinander ausführen? Um zu antworten, wählen Sie die entsprechenden Aktionen aus der Liste der Aktionen im Antwortbereich aus und ordnen Sie sie in der richtigen Reihenfolge an.**Answer:** Explanation:ExplanationStep 1: Download the OVA file for the collection appliance Azure Migrate uses an on-premises VM called the collector appliance, to discover information about your on-premises machines. To create the appliance, you download a setup file in Open Virtualization Appliance (.ova) format, and import it as a VM on your on-premises vCenter Server.Step 2: Create a migration group in the projectFor the purposes of assessment, you gather the discovered VMs into groups. For example, you might group VMs that run the same application. For more precise grouping, you can use dependency visualization to view dependencies of a specific machine, or for all machines in a group and refine the group.Step 3: Create an assessment in the projectAfter a group is defined, you create an assessment for it. References:<https://docs.microsoft.com/en-us/azure/migrate/migrate-overview>

NEW QUESTION: 3You have a web application deployed as a managed instance group. You have a new version of the application to gradually deploy. Your web application is currently receiving live web traffic.You want to ensure that the available capacity does not decrease during the deployment. What should you do?**A.** Create a new managed instance group with an updated instance template.Add the group to the backend service for the load balancer.When all instances in the new managed instance group are healthy, delete the old managed instance group.**B.** Perform a rolling-action start-update with maxSurge set to 1 and maxUnavailable set to 0.**C.** Perform a rolling-action start-update with maxSurge set to 0 and maxUnavailable set to 1.**D.** Create a new instance template with the new application version.Update the existing managed instance group with the new instance template.Delete the instances in the managed instance group to allow the managed instance group to recreate the instance using the new instance template.**Answer: B**Explanation:We need to ensure the global capacity remains intact,

for that reason we need to establish maxUnavailable to 0. On the other hand, we need to ensure new instances can be created. We do that by establishing the maxSurge to 1. Option C is more expensive and more difficult to set up and option D won't meet requirements since it won't keep global capacity intact.
