They are located in the\$ORACLE\_HOME/rdbms/admin directory and provide a wrapper on the UTL\_RECOMP package. The utlrp.sql script simply calls the utlprp.sql script with a command line parameter of "0". The utlprp.sql accepts a single integer parameter that indicates the level of parallelism as follows.0 - The level of parallelism is derived based on the CPU\_COUNT parameter.1 - The recompilation is run serially, one object at a time.N - The recompilation is run in parallel with "N" number of threads.Both scripts must be run as the SYS user, or another user with SYSDBA, to work correctly.References:
