And after the payment is done, our customers can have access to APP & PDF version of C-THR84-2405 practice test materials that they've purchased and can download PDF & Soft version.

**NEW QUESTION: 1** Refer to the exhibit. You are configuring the router to provide Static NAT for the web server. Drag and drop the configuration commands from left onto the letters that correspond to its position in the configuration on the right.**Answer:** Explanation: Explanation

**NEW QUESTION: 2** You have multiple IAM users who launch different types of compute Instances and block volumes every day. As a result, your Oracle cloud Infrastructure (OCI) tenancy quickly hit the service limit and you can no longer create any new instances. As you are cleaning up environment, you notice that the majority of the Instances and block volumes are untagged. Therefore, It is difficult to pinpoint the owner of these resources verify if they are safe to terminate. Because of this, your company has issued a new mandate, which requires adding compute instances. Which option is the simplest way to implement this new requirement?**A.** Create a default tag for each compartment, which ensure that appropriate tags are applied at resource creation**B.** Create tag variables for each compartment to automatically tag a resource with the user name.**C.** Create a policy to automatically tag a resource with the user name.**D.** Create a policy using IAM requiring users to tag specific resources. This will allow a user to launch compute instances only if certain tags were defined.**E.** Create tag variables to automatically tag a resource with the user name.**Answer: E** Explanation: Tag Variables You can use a variable to set the value of a defined tag. When you add the tag to a resource, the variable resolves to the data it represents. You can use tag variables in defined tags and default tags. Supported Tag Variables The following tag variables are supported. `{iam.principal.name}` The name of the principal that tagged the resource `{iam.principal.type}` The type of principal that tagged the resource. `{oci.datetime}` The date and time that the tag was created. Consider the following example: `Operations.CostCenter=" {iam.principal.name} at {oci.datetime} "` Operations is the namespace, CostCenter is the tag key, and the tag value contains two tag

variables `${iam.principal.name}` and `${oci.datetime}`. When you add this tag to a resource, the variable resolves to your user name (the name of the principal that applied the tag) and a time date stamp for when you added the tag. `user_name` at 2019-06-18T18:00:57.604Z. The variable is replaced with data at the time you apply the tag. If you later edit the tag, the variable is gone and only the data remains. You can edit the tag value in all the ways you would edit any other tag value. To create a tag variable, you must use a specific format. `${<variable>}` Type a dollar sign followed by open and close curly brackets. The tag variable goes between the curly brackets. You can use tag variables with other tag variables and with string values. Tag defaults let you specify tags to be applied automatically to all resources, at the time of creation, in a specific compartment. This feature allows you to ensure that appropriate tags are applied at resource creation without requiring the user who is creating the resource to have access to the tag namespaces.
