**NEW QUESTION: 1**Which one of these features is NOT associated with the Check Point URL Filtering and Application Control Blade?**A.** Use UserCheck to help users understand that certain websites are against the company's security policy.**B.** Detects and blocks malware by correlating multiple detection engines before users are affected.**C.** Configure rules to limit the available network bandwidth for specified users or groups.**D.** Make rules to allow or block applications and Internet sites for individual applications, categories, and risk levels.**Answer: B**  
Explanation:Explanation/Reference:Explanation:Use the URL Filtering and Application Control Software Blades to:Create a Granular Policy - Make rules to allow or block applications and Internet sites for individual applications, categories, and risk levels. You can also create an HTTPS policy that enables Security Gateways to inspect HTTPS traffic and prevent security risks related to the SSL protocol.Manage Bandwidth Consumption - Configure rules to limit the available network bandwidth for specified users or groups. You can define separate limits for uploading and downloading.Keep Your Policies Updated - The Application Database is updated regularly, which helps you make sure that your Internet security policy has the newest applications and website categories. Security Gateways connect to the Check Point Online Web Service to identify new social networking widgets and website categories.Communicate with Users - UserCheck objects add flexibility to URL Filtering and Application Control and let the Security Gateways communicate with users. UserCheck helps users understand that certain websites are against the company's security policy. It also tells users about the changes in Internet policy related to websites and applications.Reference:

**NEW QUESTION: 2**Which benefit are customers seeking from cloud computing and hybrid infrastructures?**A.** Fixed network components to increase stability.**B.** Automated provisioning of resources for services.**C.** The ability to always reserve resources for specific services.**D.** A better way to control devices that users bring from home.**Answer: B**

**NEW QUESTION: 3**An organization with an Active Directory Domain Services (AD DS) domain migrates to Office 365. You need to manage Office 365 from a domain-joined Windows Server 2012 Core server.Which three components should you install? Each answer presents part of the solution.**A.** Microsoft Online Services Sign-in Assistant**B.** Microsoft .NET Framework 3.5**C.** Microsoft Office 365 Integration Module for Windows Small Business Server 2011 Essentials**D.** Microsoft .NET Framework 4.0**E.** Rights Management module for Windows PowerShell**F.** Azure Active Directory module for Windows PowerShell**Answer: A,B,F**  
Explanation:You can use Windows PowerShell to administer Office 365 and Azure Active Directory.However, the default installation of Windows PowerShell on Windows Server 2012 (or any other version of Windows) does not include the PowerShell cmdlets required to manage Office 365 or Azure Active

Directory. You need to install the PowerShell module that includes the necessary cmdlets for managing Azure Active Directory. This module is the Windows Azure Active Directory Module for Windows PowerShell module. This module also requires that Microsoft .NET Framework 3.5 is installed and enabled. Before the Windows Azure Active Directory Module for Windows PowerShell, can be installed, the Microsoft Online Services Sign-in Assistant must be installed. This will allow you to connect to your Office 365/Azure subscription from a PowerShell session on a remote computer.
