We hope you can use our C_THR85_2305 exam simulating as soon as possible, Even you come across troubles during practice the C_THR85_2305 learning materials; we will also help you solve the problems.

Passing the C_THR85_2305 exam once only, Obtaining suitable C_THR85_2305 exam guide, preparing for exams will not affect your work and life, So it is really a wise action to choose our products.

If your purpose is passing exams and getting a certification C_THR85_2305 exam bootcamp will be the right shortcut for your exam, According to scientific research of related experts, we have **Free C_THR85_2305 Download Pdf** arranged our content with suitable order for you to learn and practice with efficiency.

NEW QUESTION: 1You need to store the user agreements. Where should you store the agreement after it is completed?
A. Azure Storage queue
B. Azure Service Bus topic
C. Azure Event Hub
D. Azure Event Grid topic
Answer: C
Explanation: Azure Event Hub is used for telemetry and distributed data streaming. This service provides a single solution that enables rapid data retrieval for real-time processing as well as repeated replay of stored raw data. It can capture the streaming data into a file for processing and analysis. It has the following characteristics: low latency, capable of receiving and processing millions of events per second at least once delivery.
Reference:
<https://docs.microsoft.com/en-us/azure/event-grid/compare-messaging-services>
Topic 1, Contoso, Ltd. To start the case study To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the Question button to return to the question.
Background Overview You are a developer for Contoso, Ltd. The company has a social networking website that is developed as a Single Page Application (SPA). The main web application for the social networking website loads user uploaded content from blob storage. You are developing a solution to monitor uploaded data for inappropriate content. The following process occurs when users upload content by using the SPA:
* Messages are sent to ContentUploadService.
* Content is processed by ContentAnalysisService.
* After processing is complete, the content is posted to the social network or a rejection message is posted in its place.
The ContentAnalysisService is deployed with Azure Container Instances from a private Azure Container Registry named contosoimages. The solution will use eight CPU cores.
Azure Active Directory Contoso, Ltd. uses Azure Active Directory (Azure AD) for both internal and guest accounts.
Requirements ContentAnalysisService The company's data science group built ContentAnalysisService which accepts user generated content as a string and returns a probable value for inappropriate content. Any values over a specific threshold must be reviewed by an employee of Contoso, Ltd. You must create an Azure Function named CheckUserContent to perform the content checks.
Costs You must minimize costs for all Azure services.
Manual review To review content, the user must authenticate to the website portion of the ContentAnalysisService using their Azure AD credentials. The website is built using React and all pages and API endpoints require authentication. In order to review content a user must be part of a ContentReviewer role. All completed reviews must include the reviewer's email address for auditing purposes.
High availability All services must run in multiple regions. The failure of any service in a region must not impact overall application availability.
Monitoring An alert must be raised if the ContentUploadService uses more than 80 percent of

available CPU cores. Security You have the following security requirements: Any web service accessible over the Internet must be protected from cross site scripting attacks. All websites and services must use SSL from a valid root certificate authority. Azure Storage access keys must only be stored in memory and must be available only to the service. All Internal services must only be accessible from internal Virtual Networks (VNets). All parts of the system must support inbound and outbound traffic restrictions. All service calls must be authenticated by using Azure AD. User agreements When a user submits content, they must agree to a user agreement. The agreement allows employees of Contoso, Ltd. to review content, store cookies on user devices, and track user's IP addresses. Information regarding agreements is used by multiple divisions within Contoso, Ltd. User responses must not be lost and must be available to all parties regardless of individual service uptime. The volume of agreements is expected to be in the millions per hour. Validation testing When a new version of the ContentAnalysisService is available the previous seven days of content must be processed with the new version to verify that the new version does not significantly deviate from the old version. Issues Users of the ContentUploadService report that they occasionally see HTTP 502 responses on specific pages. Code ContentUploadService

NEW QUESTION: 2 統合変更管理の実行は、次のプロセスです。 **A.**
