Our leading experts have devoted many time to compiling the questions and answers of the ISO/IEC 27032 Lead Cybersecurity Manager training material, If you want the Lead-Cybersecurity-Manager certification to change your life and make it better, what are you waiting for?

To exam candidates who eager desirable outcomes, they are excellent Lead-Cybersecurity-Manager guide torrent materials for your reference.

**NEW QUESTION: 1**VLANデータベースに存在するVLANを表示する2つのコマンドはどれですか？  
(2つ選択) **A.** VLAN概要を表示**B.** VLANを表示**C.** running-configを表示**D.** VLAN IDを表示**E.** VLANデータベースを表示**Answer: A,B**

**NEW QUESTION: 2**HOTSPOT**Answer:** Explanation:

**NEW QUESTION: 3**Which of the following would be of MOST concern to an IS auditor reviewing a virtual private network (VPN) implementation? Computers on the network that are located:**A.** in employees' homes.**B.** on the enterprise's internal network.**C.** at the backup site.**D.** at the enterprise's remote offices.**Answer: A****Explanation:**One risk of a virtual private network (VPN) implementation is the chance of allowing high-risk computers onto the enterprise's network. All machines that are allowed onto the virtual network should be subject to the same security policy. Home computers are least subject to the corporate security policies, and therefore are high-risk computers. Once a computer is hacked and 'owned/ any network that trusts that computer is at risk. Implementation and adherence to corporate security policy is easier when all computers on the network are on the enterprise's campus. On an enterprise's internal network, there should be security policies in place to detect and halt an outside attack that uses an internal machine as a staging platform. Computers at the backup site are subject to the corporate security policy, and therefore are not high-risk computers. Computer on the network that are at the enterprise's remote offices, perhaps with different IS and security employees who have different ideas about security, are more risky than choices A and B, but obviously less risky than home computers.
