NEW QUESTION: 4DRAG DROPChoose and select the information present in the header of a single IP packet that are helpful in packet filtering.Select and Place:**Answer:** Explanation: Explanation/Reference:Explanation:An IP packet is a formatted unit of data carried by a packet mode computer network. A packet consists of two kinds of data:control information and user data (also known as payload). The control information provides data the network needs to deliver the user data, for example: source and destination addresses, error detection codes like checksums, and sequencing information. Typically, control information is found in packet headers and trailers, with user data in between.IP packets are composed of a header and payload. Every IP packet has a set of headers containing certain information. The main information is as follows:IP source addressIP destination addressProtocol (whether the packet is a TCP, UDP, or ICMP packet)TCP or UDP source portTCP or UDP destination portICMP

message typeThe structure of an IP packet is as follows:
