NEW QUESTION: 4An application has hundreds of users. Each user may use multiple devices to access the application. The Developer wants to assign unique identifiers to these users regardless of the device they use.Which of the following methods should be used to obtain

unique identifiers?**A.** Implement developer-authenticated identities by using Amazon Cognito, and get credentials for these identities.**B.** Assign IAM users and roles to the users. Use the unique IAM resource ID as the unique identifier.**C.** Create a user table in Amazon DynamoDB as key-value pairs of users and their devices. Use these keys as unique identifiers.**D.** Use IAM-generated access key IDs for the users as the unique identifier, but do not store secret keys.
Answer: AExplanation:ExplanationAmazon Cognito developer-authenticated identities helps authenticate, identify the user across devices.Refer AWS documentation - Cognito Developer Authenticated IdentitiesAmazon Cognito supports developer authenticated identities, in addition to web identity federation through Facebook (Identity Pools), Google (Identity Pools), and Login with Amazon (Identity Pools). With developer authenticated identities, you can register and authenticate users via your own existing authentication process, while still using Amazon Cognito to synchronize user data and access AWS resources. Using developer authenticated identities involves interaction between the end user device, your backend for authentication, and Amazon Cognito.
