**NEW QUESTION: 1**Which of the following is not the challenge facing the data center service migration?**A.** Complexity**B.** Resource utilization**C.** Stability**D.** Business continuity**Answer: B**

**NEW QUESTION: 2**Note: This question is part of series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.You have an Azure Active Directory (Azure AD) tenant named contoso.com.A user named Admin1 attempts to create an access review from the Azure Active Directory admin center and discovers that the Access reviews settings are unavailable. Admin1 discovers that all the other Identity Governance settings are available.Admin1 is assigned the User administrator, Compliance administrator, and Security administrator roles.You need to ensure that Admin1 can create access reviews in contoso.com.Solution: You assign the Service administrator role to Admin1. Does this meet the goal?**A.** Yes**B.** No**Answer: B**Explanation:ExplanationInstead use Azure AD Privileged Identity Management.Note: PIM essentially helps you manage the who, what, when, where, and why for resources that you care about. Key features of PIM include:\* Conduct access reviews to ensure users still need rolesReferences:  
<https://docs.microsoft.com/en-us/azure/active-directory/privileged-identity-management/pim-configure>

**NEW QUESTION: 3**An organization is hosting a scalable web application using AWS. The organization has configured ELB and Auto Scaling to make the application scalable.Which of the below mentioned statements is not required to be followed for ELB when the application is planning to host a web application on VPC?**A.** The internet facing ELB should be only in a public subnet.**B.** The ELB and all the instances should be in the same subnet.**C.** Configure the security group rules and network ACLs to allow traffic to be routed between the subnets in the VPC.**D.** The internet facing ELB should have a route table associated with the internet gateway.**Answer: B**Explanation:Amazon Virtual Private Cloud (Amazon VPC) allows the user to define a virtual networking environment in a private, isolated section of the Amazon Web Services (AWS) cloud. The user has complete control over the virtual networking environment. Within this virtual private cloud, the user can launch AWS resources, such as an ELB, and EC2 instances. There are two ELBs available with VPC: internet facing and internal (private) ELB. For the internet facing ELB it is required that the ELB should be in a public subnet. After the user creates the public subnet, he should ensure to associate the route table of the public subnet with the internet gateway to enable the load balancer in the subnet to connect with the

internet. The ELB and instances can be in a separate subnet. However, to allow communication between the instance and the ELB the user must configure the security group rules and network ACLs to allow traffic to be routed between the subnets in his VPC.
