All above, you must fully understand our Cisco Certified Support Technician (CCST) NetworkingExam exam dump file, CCST-Networking certification exams are extremely popular.

NEW QUESTION: 1 Ihr Netzwerk enthält eine Active Directory-Domäne mit dem Namen contoso.com. Die Domäne enthält einen DNS-Server mit dem Namen Server1. Server1 ist so konfiguriert, dass eine Weiterleitung namens Server2 mit einer IP-Adresse von 10.0.0.10 verwendet wird. Server2 kann im Internet gehostete Namen erfolgreich auflösen. Server2 hostet eine primäre DNS-Zone namens adatum.com. Auf Server1 haben Sie die folgende Zonenkonfiguration. Das "." zone enthält die folgenden Datensätze. Wählen Sie für jede der folgenden Anweisungen Ja aus, wenn die Anweisung wahr ist. Andernfalls wählen Sie Nein.

Answer: Explanation:

NEW QUESTION: 2 A user has created a queue named "myqueue" with SQS. There are four messages published to the queue which are not received by the consumer yet. If the user tries to delete the queue, what will happen?
A. It will delete the queue
B. A user can never delete a queue manually. AWS deletes it after 30 days of inactivity on the queue
C. It will initiate the delete but wait for four days before deleting until all messages are deleted automatically
D. It will ask user to delete the messages first
Answer: A
Explanation: SQS allows the user to move data between distributed components of applications so they can perform different tasks without losing messages or requiring each component to be always available. The user can delete a queue at any time, whether it is empty or not. It is important to note that queues retain messages for a set period of time. By default, a queue retains messages for four days.

NEW QUESTION: 3 Our company has a main office and 10 branch offices. The network contains an Active Directory forest named contoso.com. Each office contains domain controllers. You have a System Center 2012 R2 infrastructure that has Operations Manager and Service Manager installed. Each office has multiple VLANs. All switches are managed switches. Users in the branch offices occasionally call the help desk to report that they cannot access some of the network resources in the main office. You need to ensure that all of the ports on the switches can be monitored by using Operations Manager. What is the best configuration to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.
A. An explicit discovery for the network devices by using SNMP
B. An explicit discovery for the network devices by using ICMP
C. A recursive discovery for the network devices by using ICMP
D. A recursive discovery for the network devices by using SNMP
Answer: A
