NEW QUESTION: 3If the returns of an asset display a strong tendency for mean reversion, what

is the relationship between annualized volatility calculated based on daily versus weekly volatilities (using the square root of time rule)?**A.** Either daily or weekly volatility will be greater, depending upon how the week went**B.** Daily and weekly volatilities will be the same**C.** Weekly volatility will be greater than daily volatility**D.** Daily volatility will be greater than weekly volatility**Answer: D**
Explanation: Explanation If returns display mean reversion, then clearly daily volatilities will be greater than weekly volatility, both annualized using the square root of time rule. Mean reversion would imply that the deviation from the mean will be lower over a longer time period than a shorter time period, and therefore annualized volatility based on daily volatility will be greater.

Cisco Unity Express supports three types of triggers: SIP triggers -- Use this type of trigger to invoke applications in Cisco Unified CME and Cisco SRST mode. This type of trigger is identified by the phonenummer which is dialed to invoke the desired application. JTAPI triggers -- Use this type of trigger to invoke applications in Cisco Unified Communications desired application. HTTP triggers -- Use this type of trigger to invoke applications using an incoming HTTP request. Such a trigger is identified by the URL suffix of the incoming HTTP request. This type of trigger can only be used if an IVR license has been purchased and installed on the system.
