NEW QUESTION: 1 Which of the following would commonly be found in a contract underpinning an IT service?
1. Financial arrangements related to the contract
2. Description of the goods or service provided
3. Responsibilities and dependencies for both parties
A. 1 and 2 only
B. 2 and 3 only
C. All of the above
D. 1 and 3 only
Answer: C

NEW QUESTION: 2 You need to group all the style settings into a separate file that can be applied to all the pages in a Web application. What should you do?
A. Use a WebKit.
B. Use an Extensible Markup Language (XML) schema.
C. Use a Cascading Style Sheet (CSS).
D. Use inline styles.
Answer: C
Explanation: Cascading Style Sheets (CSS) is a style sheet language used for describing the look and formatting of a document written in a markup language. CSS is designed primarily to enable the separation of document content from document presentation, including elements such as the layout, colors, and fonts.

NEW QUESTION: 3 During the development of your application, you created operators for testing purposes. You are preparing to migrate the application to another environment. You do not want to include the operators in the archive file. Which two options exclude the operators? (Choose two.)
A. Before you run the Application Packaging wizard, remove the associated ruleset from the operator records
B. In the Operators step in the Application Packaging Wizard, clear the check boxes next to the operator names. In the Product rule, clear the Include associated data items check box.
C. Before you run the Application Packaging wizard, save the operators to an organization ruleset. Select the Exclude non-versioned rules check box in the Product rule.
D. In the Operators step in the Application Packaging Wizard, clear the check boxes next to the operator names. In the Product rule, clear the Include data types check box.
Answer: A,B

NEW QUESTION: 4 In an Ethernet network, under what two scenarios can devices transmit? (Choose two.)
A. when they detect no other devices are sending
B. when there is a carrier
C. when the medium is idle
D. when they receive a special token
E. when the server grants access

Answer: A, C
Explanation: Ethernet network is a shared environment so all devices have the right to access to the medium. If more than one device transmits simultaneously, the signals collide and cannot reach the destination. If a device detects another device is sending, it will wait for a specified amount of time before attempting to transmit. When there is no traffic detected, a device will transmit its message. While this transmission is occurring, the device continues to listen for traffic or collisions on the LAN. After the message is sent, the device returns to its default listening mode.
