NEW QUESTION: 1Which two benefits do the workload-targeted cartridges in a Moonshot chassis provide? (Select two.)
A. support for SAN optimized environments
B. purpose-built servers
C. reduced bandwidth through virtualization
D. fewer controllers for easier management
E. customized application platform
Answer: B,D

NEW QUESTION: 2A router is connected to an HDLC circuit via a T1 physical interface. The SLA for this link only allows for a sustained rate of 768 kb/s. Bursts are allowed for up to 30 seconds at up to line rate, with a window Tc of 125 ms. What should the Bc and Be setting be when using generic traffic shaping?
A. Be = 46320000 , Bc = 96000
B. Be = , 0 Be = 96000
C. Be = , 768000 Be = 32000
D. Be = , 128000 Be = 7680
Answer: A
Explanation: Tc= 125 CIR = 768
What is the Be
T1 = 1.544 Mbps
Bursts are allowed for 30 seconds
Seconds * Bandwidth in bps = Be
30 * 1544000 = Be
30 * 1544000 = 46320000
Be = 46320000
What is Bc?
Bc = Tc * CIR
Bc = 125 * 768
Bc = 96000
Traffic Shaping Parameters
We can use the following traffic shaping parameters:
CIR = committed information rate (= mean time)
EIR = excess information rate
TB = token bucket (= Bc + Be)
Bc = committed burst size (= sustained burst size)
Be = excess burst size
DE = discard eligibility
Tc = measurement interval
AR = access rate corresponding to the rate of the physical interface (so if you use a T1, the AR is approximately 1.5 Mbps).
Committed Burst Size (Bc)
The maximum committed amount of data you can offer to the network is defined as Bc. Bc is a measure for the volume of data for which the network guarantees message delivery under normal conditions. It is measured during the committed rate Tc.
Excess Burst Size (Be)
The number of noncommitted bits (outside of CIR) that are still accepted by the Frame Relays switch but are marked as eligible to be discarded (DE). The token bucket is a 'virtual' buffer. It contains a number of tokens, enabling you to send a limited amount of data per time interval. The token bucket is filled with Bc bits per Tc. The maximum size of the bucket is Bc + Be. If the Be is very big and, if at T0 the bucket is filled with Bc + Be tokens, you can send Bc + Be bits at the access rate. This is not limited by Tc but by the time it takes to send the Be. This is a function of the access rate.
Committed Information Rate (CIR)
The CIR is the allowed amount of data which the network is committed to transfer under normal conditions. The rate is averaged over a increment of time Tc. The CIR is also referred to as the minimum acceptable throughput. Bc and Be are expressed

in bits, Tc in seconds, and the access rate and CIR in bits per second. Bc, Be, Tc and CIR are defined per datalink connection identifier (DLCI). Due to this, the token bucket filter controls the rate per DLCI. The access rate is valid per user network interface. For Bc, Be and CIR incoming and outgoing values can be distinguished. If the connection is symmetrical, the values in both directions are the same. For permanent virtual circuits, we define incoming and outgoing Bc, Be and CIR at subscription time. Peak = DLCI's maximum speed. The bandwidth for that particular DLCI. $Tc = Bc / CIR$ $Peak = CIR + Be / Tc = CIR (1 + Be / Bc)$ If the Tc is one second then: $Peak = CIR + Be = Bc + Be$ Reference <http://www.cisco.com/warp/public/125/21.pdf>

NEW QUESTION: 3 Examine the parameters for a database instance: Which two statements are true? **A.** Undo records for temporary tables are stored in the undo tablespace and logged in the redo only for those sessions where temporary undo is enabled. **B.** No redo and undo records are generated for temporary tables. **C.** Undo records for temporary tables are stored in the undo tablespace and logged in the redo. **D.** No redo is generated for the undo records belonging to temporary tables. **E.** Undo records for temporary tables are stored in a temporary tablespace.

Answer: A, B

NEW QUESTION: 4 Which file is used to automatically check and mount file systems? **A.** /etc/fstab **B.** /var/adm/fstab **C.** /etc/mnttab **D.** /etc/sbtab **Answer: A**
