NEW QUESTION: 3You execute the following code:You need to select the task that has an IsFinished value of true from the Project that has an Id value of 1.Which code segment should you use?**A.** Option DB. Option CC. Option BD. Option A**Answer: C**

NEW QUESTION: 4

分散アプリケーションを開発していて、特定のJSONコンテンツを常に返すパスへの呼び出しが必要で、以下のAPIデプロイメント仕様でOracle Cloud Infrastructure API Gatewayをデプロイします。タイプの正しい値は何ですか?**A.** JSON_BACKEND**B.** HTTP_BACKEND**C.** CONSTANT_BACKEND**D.** STOCK_RESPONSE_BACKEND**Answer: D**
Explanation:ExplanationAdding Stock Responses as an API Gateway Back End:You'll often want to verify that an API has been successfully deployed on an API gateway without having to set up an actual back-end service. One approach is to define a route in the API deployment specification that has a path to a 'dummy' back end. On receiving a request to that path, the API gateway itself acts as the back end and returns a stock response you've specified. Equally, there are some situations in a production deployment where you'll want a particular path for a route to consistently return the same stock response without sending a request to a back end. For example, when you want a call to a path to always return a specific HTTP status code in the response. Using the API Gateway service, you can define a path to a stock response back end that always returns the same:HTTP status codeHTTP header fields (name-value pairs)content

in the body of the response "type": "STOCK_RESPONSE_BACKEND" indicates that the API gateway itself will act as the back end and return the stock response you define (the status code, the header fields and the body content).References:
