Of course, passing the exam and get the NS0-003 certificate is just a piece of cake.

NEW QUESTION: 1A. Option CB. Option BC. Option AD. Option DAnswer: D

NEW QUESTION: 2CORRECT TEXTScenario: Members of the HR user group at CCH need access to desktops running Windows 8. The desktops provided to HR users must be in a separate device collection named HR. As part of a pilot, a Citrix Administrator must use the Provisioning Services Console to create the device collection and initially four target devices with plans to add 20 more. The target devices named Win801T Win802. Win803 and Win804 should be assigned the CCH_Win8 vDisk and those devices should be assigned to the HR OU. XenDesktop is NOT being used for the HR team at the moment.The hypervisor information for the environment is:-XenServer IP Address: 192.168.10.5 -Username: root -Password: Password 1
Tasks:1.Create a device collection named HR.2.Create four target devices named Win801, Win802. Win803 and Win804, and add the target devices to the HR device collection.3.Ensure the target devices are configured to meet the requirements outlined in the scenario.**Answer:**
Explanation:Review the steps and solution in explanation below.Explanation:Creating a Device CollectionTo create a new device collection:Run the wizardThe wizard is run directly from the Provisioning Services Console or from a remote console. Before running the wizard, be sure that all prerequisites are met. See the installation requirements content Requirements. Note: XenServer 5.5 Update 2 virtualization settings do not display. These setting are added in XenDesktop as host connections using the Manually create VMs option. As a result, you cannot specify a network or storage location for them, therefore it is not listed in the XenDesktop Setup Wizard. The page that displays depends on which Active Directory method you select. Name,Type,Description, PVSPC01,Computer,, The Required count displays the number of VMs previously specified. The Added count displays the number of entries in the list. If you import machine account names that already exist in any of the following locations, they are not valid and do not display in the list; XenDesktop (as a machine), PVS (as a device), on the hypervisor (as a VM). If the AD structure contains a large number of objects or containers, or you are importing a large amount of machine accounts, the import may take awhile as it must validate that each imported account does not already exist in Provisioning Services, XenDesktop, and the destination hypervisor. If this is the case, you should receive feedback in the form of an hour glass cursor while the import completes.

NEW QUESTION: 3Which Salesforce tool should an administrator use to better understand all of the configuration changes that have been made from January 1 through July 1?**A. Setup Audit TrailB. Custom Report TypeC. Network Access SettingsD. Debug LogAnswer: A**
