NEW QUESTION: 1A user has a laptop configured with multiple operating system installations. The operating systems are all installed on a single SSD, but each has its own partition and logical volume. Which of the following is the BEST way to ensure confidentiality of individual operating system data?**A.** FDE of the entire SSD as a single disk**B.** Encryption of the SSD at the file level**C.** Encryption of each individual partition**D.** FDE of each logical volume on the SSD

Answer: CExplanation:ExplanationIn this question, we have multiple operating system installations on a single disk. Some operating systems store their boot loader in the MBR of the disk. However, some operating systems install their boot loader outside the MBR especially when multiple operating systems are installed. We need to encrypt as much data as possible but we cannot encrypt the boot loaders. This would prevent the operating systems from loading. Therefore, the solution is to encrypt each individual partition separately.
