Seeing is believing, if you still have **BAPv5 New Test Camp** any misgivings just feel free to download our free demo in this website.

**NEW QUESTION: 1** Contoso, Ltd. provides an API to customers by using Azure API Management (APIM). The API authorizes users with a JWT token. You must implement response caching for the APIM gateway. The caching mechanism must detect the user ID of the client that accesses data for a given location and cache the response for that user ID. You need to add the following policies to the policies file: \* a set-variable policy to store the detected user identity \* a cache-lookup-value policy \* a cache-store-value policy \* a find-and-replace policy to update the response body with the user profile information To which policy section should you add the policies? To answer, drag the appropriate sections to the correct policies. Each section may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content **NOTE:** Each correct selection is worth one point **Answer:** Explanation: Explanation Box 1: Inbound. A set-variable policy to store the detected user identity. Example: `<policies><inbound><!-- How you determine user identity is application dependent --><set-variablename="enduserid" value="@context.Request.Headers.GetValueOrDefault("Authorization","").Split(' ')[1].AsJwt()?.Subject" />` Box 2: Inbound A cache-lookup-value policy Example: `<inbound><base /><cache-lookup vary-by-developer="true | false" vary-by-developer-groups="true | false" downstream-caching-type="none | private | public" must-revalidate="true | false"><vary-by-query-parameter>parameter name</vary-by-query-parameter> <!-- optional, can repeated several times --></cache-lookup></inbound>` Box 3: Outbound A cache-store-value policy. Example: `<outbound><base /><cache-store duration="3600" /></outbound>` Box 4: Outbound A find-and-replace policy to update the response body with the user profile information. Example: `<outbound><!-- Update response body with user profile--><find-and-replace from="$userprofile$" to="@((string)context.Variables["userprofile"])" /><base /></outbound>` Reference: <https://docs.microsoft.com/en-us/azure/api-management/api-management-caching-policies> <https://docs.microsoft.com/en-us/azure/api-management/api-management-sample-cache-by-key>

**NEW QUESTION: 2** Which three Cisco Unified Communications Manager settings can be used to support IP phone services? (Choose three.) **A.** Service Parameters **B.** Enterprise Parameters **C.** IP Phone Service Configuration window **D.** Common Phone Profile **E.** Device Defaults **F.** Phone Configuration window **Answer: B,D,F** Explanation: Provisioning mode is controlled via the following settings: -Enterprise parameter-Common phone profile-Phone configuration Topic 7,

## Miscellaneous

**NEW QUESTION: 3** DRAG DROP - (Topic 1) You plan to implement row-level security for the CWDB database. You create the fn\_limitusers function under the restriction schema. You need to create the policy. How should you complete the policy? To answer, drag the appropriate elements to the correct locations. Each element may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. **Answer:**

**Explanation:** **Explanation:** **References:** <https://msdn.microsoft.com/en-us/library/dn765131.aspx>  
Topic 2, ADatum Corporation Overview General Overview ADatum Corporation is a real estate firm that has offices throughout North America. ADatum has a main office and four branch offices. The main office is located in Seattle. The branch offices are located in New York, Montreal, Denver, and Vancouver. Existing Environment Network Infrastructure The network contains one Active Directory domain named ADatum.com. Each office contains one domain controller. Each office has a 100-Mbps connection to the Internet that is 20 percent saturated on average. The offices connect to each other through the Internet by using VPN appliances. ADatum uses the public IP addresses shown in the following table. SQL Server Infrastructure In the main office, ADatum hosts a Microsoft SQL Server instance on a server named SQL1. SQL1 has a 400-GB database named Listings. Log-shipped copies of Listings are present in each branch office. The copies are used for reporting. Currently, all of the SQL Server instances run SQL Server 2014 Enterprise edition. Each branch office has an application server that hosts an application named App1. App1 is configured to connect to the Listings database on each local SQL Server instance for reporting and to connect to the SQL Server instance in the main office for any updates to property listings. The main office also has an application server that hosts App1. The application server connects to the local Listings database for reporting and for any updates to the property listings. Historic activity of the Listings database shows a maximum of 475 concurrent requests from as many as 200 concurrent connections. User Issues Users report that, frequently, they are disconnected from the Listings database when they run reports. Users also report that there is an unacceptable delay between when a property listing is updated and when the updated listing appears in the listings reports. Developers report concerns about the lack of a testing environment in which code changes can be validated before being deployed to the production Listings database. Requirements Business Requirements ADatum identifies the following business requirements: Planned changes ADatum plans to implement the following changes: Technical Requirements ADatum identifies the following technical requirements: High-Availability and Recovery Requirements ADatum identifies the following high-availability and recovery requirements:

**NEW QUESTION: 4** How does an Nmap connect scan work? **A.** It sends a SYN, waits for a SYN/ACK, then sends a RST. **B.** It sends a SYN, waits for a ACK, then sends a SYN/ACK. **C.** It sends a SYN, waits for a SYN/ACK, then sends a ACK. **D.** It sends a SYN, waits for a ACK, then sends a RST. **Answer: A** **Explanation:** An Nmap connect scan sends a SYN, waits for a SYN/ACK, then sends a ACK to complete the three-way handshake. A Nmap half-open scan sends a SYN, waits for a SYN/ACK, then sends a RST.
