The domain contains two domain controllers. The domain controllers are configured as shown in the following table. Active Directory Recycle Bin is enabled. You discover that a support technician accidentally removed 100 users from an Active Directory group named Group1 an hour ago. You need to restore the membership of Group1. What should you do?  
**A.** Perform an authoritative restore.  
**B.** Perform tombstone reanimation.  
**C.** Modify the Recycled attribute of Group1.  
**D.** Recover the items by using Active Directory Recycle Bin.  
**Answer: D**  
Explanation: Active Directory Recycle Bin helps minimize directory service downtime by enhancing your ability to preserve and restore accidentally deleted Active Directory objects without restoring Active Directory data from backups, restarting Active Directory Domain Services (AD DS), or rebooting domain controllers. When you enable Active Directory Recycle Bin, all link-valued and non-link-valued attributes of the deleted Active Directory objects are preserved and the objects are restored in their entirety to the same consistent logical state that they were in immediately before deletion. For example, restored user accounts automatically regain all

group memberships and corresponding access rights that they had immediately before deletion, within and across domains.
