**NEW QUESTION: 1**Case Study: 4 - Dress4WinCompany OverviewDress4win is a web-based company that helps their users organize and manage their personal wardrobe using a website and mobile application. The company also cultivates an active social network that connects their users with designers and retailers. They monetize their services through advertising, e-commerce, referrals, and a freemium app model.Company BackgroundDress4win's application has grown from a few servers in the founder's garage to several hundred servers and appliances in a collocated data center. However, the capacity of their infrastructure is now insufficient for the application's rapid growth. Because of this growth and the company's desire to innovate faster, Dress4win is committing to a full migration to a public cloud.Solution ConceptFor the first phase of their migration to the cloud, Dress4win is considering moving their development and test environments. They are also considering building a disaster recovery site, because their current infrastructure is at a single location. They are not sure which components of their architecture they can migrate as is and which components they need to change before migrating them.Existing Technical EnvironmentThe Dress4win application is served out of a single data center location.Databases:MySQL - user data, inventory, static dataRedis - metadata, social graph, cachingApplication servers:Tomcat - Java micro-servicesNginx - static contentApache Beam - Batch processingStorage appliances:iSCSI for VM hostsFiber channel SAN - MySQL databasesNAS - image storage, logs, backupsApache Hadoop/Spark servers:Data analysisReal-time trending calculationsMQ servers:Messaging Social notificationsEventsMiscellaneous servers:Jenkins, monitoring, bastion hosts, security scannersBusiness RequirementsBuild a reliable and reproducible environment with scaled parity of production. Improve security by defining and adhering to a set of security and Identity and Access Management (IAM) best practices for cloud.Improve business agility and speed of

innovation through rapid provisioning of new resources. Analyze and optimize architecture for performance in the cloud. Migrate fully to the cloud if all other requirements are met. Technical Requirements Evaluate and choose an automation framework for provisioning resources in cloud. Support failover of the production environment to cloud during an emergency. Identify production services that can migrate to cloud to save capacity. Use managed services whenever possible. Encrypt data on the wire and at rest. Support multiple VPN connections between the production data center and cloud environment. CEO Statement Our investors are concerned about our ability to scale and contain costs with our current infrastructure. They are also concerned that a new competitor could use a public cloud platform to offset their up-front investment and freeing them to focus on developing better features. CTO Statement We have invested heavily in the current infrastructure, but much of the equipment is approaching the end of its useful life. We are consistently waiting weeks for new gear to be racked before we can start new projects. Our traffic patterns are highest in the mornings and weekend evenings; during other times, 80% of our capacity is sitting idle. CFO Statement Our capital expenditure is now exceeding our quarterly projections. Migrating to the cloud will likely cause an initial increase in spending, but we expect to fully transition before our next hardware refresh cycle. Our total cost of ownership (TCO) analysis over the next 5 years puts a cloud strategy between 30 to 50% lower than our current model. You want to ensure Dress4Win's sales and tax records remain available for infrequent viewing by auditors for at least 10 years. Cost optimization is your top priority. Which cloud services should you choose? **A.** BigQuery to store the data, and a web server cluster in a managed instance group to access the data. Google Cloud SQL mirrored across two distinct regions to store the data, and a Redis cluster in a managed instance group to access the data. **B.** Google Bigtable with US or EU as location to store the data, and gcloud to access the data. **C.** Google Cloud Storage Nearline to store the data, and gsutil to access the data. **D.** Google Cloud Storage Coldline to store the data, and gsutil to access the data. **Answer: D** Explanation: <https://cloud.google.com/storage/docs/storage-classes>

**NEW QUESTION: 2** A user reports that some normally accessible external sites are not responding, but most other sites are responding normally. Which of the following is MOST likely the cause? **A.** Smurf attack **B.** VLAN tag mismatch **C.** Wrong subnet mask **D.** Faulty routing rule **Answer: D** Explanation: This happens when the DNS server is able to resolve the URL but there can be a conflicting route pointing to somewhere else rather than to the correct device who is responsible for routing traffic to the internet.

**NEW QUESTION: 3** What function in Case Manager Administration Client must be run to make your solution available for translation? **A.** Generate Translation Objects **B.** Deploy Solution **C.** Generate Localization Resources **D.** Solution List page **Answer: C**

**NEW QUESTION: 4** Which component of IBM Spectrum Scale enables data to be imported from several servers at the same time? **A.** Multi-Cluster feature **B.** IBM Spectrum Protect integration **C.** HDFS Transparency connector **D.** Cloud Object Storage support **Answer: B** Explanation: Explanation/Reference: With Spectrum Scale multiple Spectrum Protect instances use the same storage Capacity and performance management is seamless within a global name space Scalability is seamless and transparent File system replication is integrated with Spectrum Scale for different platforms Central administration of TSM storage Note: Multiple Spectrum Protect (TSM) instances store DB and storage pools in a Spectrum Scale file system (GPFS) Spectrum Scale provides global name space for all Spectrum Protect instances Instances share all file system resources- Spectrum Protect instances run on cluster nodes accessing the file system and disk directly- Spectrum Scale file systems balances the workload and capacity for all TSM instances on disk- Provides standardized, scalable and easy to use storage infrastructure for the multiple instances Incorrect Answers: **A:** IBM Spectrum Scale HDFS transparency offers a set of interfaces that allows applications to use HDFS Client to access IBM Spectrum Scale through HDFS RPC requests.
