NEW QUESTION: 1ダウンタイムの確率が最も低い災害復旧シナリオはどれですか？ **A.**

ウォームスタンバイ **B.**パイロットライト **C.**バックアップと復元 **D.**

マルチサイトアクティブ-アクティブ **Answer: D** Explanation: Backup and Restore: a simple, straightforward, cost-effective method that backs up and restores data as needed. Keep in mind that because none of your data is on standby, this method, while cheap, can be quite time-consuming. Pilot Light: This method keeps critical applications and data at the ready so that it can be quickly retrieved if needed. Warm Standby: This method keeps a duplicate version of your business' core elements running on standby at all times, which makes for a little downtime and an almost seamless transition. Multi-Site Solution: Also known as a Hot Standby, this method fully replicates your company's data/applications between two or more active locations and splits your traffic/usage between them. If a disaster strikes, everything is simply rerouted to the unaffected area, which means you'll suffer almost zero downtime. However, by running two separate environments simultaneously, you will obviously incur much higher costs. Reference: <https://cloudranger.com/best-practices-aws-disaster-recovery-planning/>

NEW QUESTION: 2 Which statements are true regarding the Query Result Cache? (Choose all that apply.) **A.** It can store the results of queries based on normal, temporary, and dictionary tables. **B.** It is used only across statements in the same session. **C.** It can store the results from normal as well as flashback queries. **D.** It can be set at the system, session, or table level.
