NEW QUESTION: 1HOTSPOTYour network contains a server named Server2 that has Microsoft SharePoint Foundation 2010 Service Pack 1 (SP1) installed. Server2 has a web application named Web1. Web1 contains a site collection named Site1. Users access Site1 by using the URL `http://server2.contoso.com`. You need to ensure that the users can access Site1 by using the URL `http://site1.contoso.com`. The solution must not create additional Internet Information Services (IIS) websites. What should you configure? To answer, select the appropriate link in the answer area.**Answer:** Explanation:

NEW QUESTION: 2You need to determine the output of the following code: Which X++ code segment should you use to achieve this goal? What is the output in the Infolog after running the code.**A. 10 B. 30 C. 40 D. 20 CAnswer: C**

NEW QUESTION: 3Refer to the exhibit. The network administrator is trying to configure mutual redistribution between EIGRP and OSPF. Autosummarization in EIGRP 100 AS is disabled. After adding OSPF configuration to router B1, the network administrator checked the routing table of router B2, but none of the EIGRP routes appeared there. To redistribute the EIGRP AS 100 routes into OSPF, which command should be added, or edited, on router B1 under router ospf 10?**A. no auto-summary 10.0.0.0 255.0.0.0 B. redistribute eigrp 100 metric-type 1 C. redistribute eigrp 100 subnets D. area 0 range 10.10.0.0 255.255.0.0 Answer: C**Explanation: Explanation When redistributing into OSPF without keyword "subnets", only classful networks will be redistributed. Classful networks here mean networks with the default major subnet masks (for example 10.0.0.0/8; 180.1.0.0/16; 200.200.200.0/24...). In fact, the routing table on the exhibit above is not totally correct. The network 192.168.110.0/24 will be redistributed and shown in the routing table of B2 even if the keyword "subnets" is not used because it belongs to class C with the default subnet mask of class C. To make all the networks, including subnets appear in the routing table of B2 we must use keyword "subnets" when redistributing into OSPF. This is also an important thing to remember when redistributing into OSPF.
