NEW QUESTION: 2 You have 1,000 virtual machines hosted on the Hyper-V hosts in a data center. You plan to migrate all the virtual machines to an Azure pay-as-you-go subscription. You need to identify which expenditure model to use for the planned Azure solution. Which expenditure model should you identify? **A.** capital **B.** scalable **C.** operational **D.** elastic **Answer: C**

Explanation: One of the major changes that you will face when you move from on-premises cloud to the public cloud is the switch from capital expenditure (buying hardware) to operating expenditure (paying for service as you use it). This switch also requires more careful

management of your costs. The benefit of the cloud is that you can fundamentally and positively affect the cost of a service you use by merely shutting down or resizing it when it's not needed.

NEW QUESTION: 3 DRAG DROP You are developing a SQL Server Integration Services (SSIS) package. The package contains several tasks that must repeat until an expression evaluates to FALSE. You need to add and configure a container to enable this design. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)
Answer: Explanation: Box 1: Open the Control Flow designer of the package. Box 2: Add and edit a For Loop container. Box 3: Configure the EvalExpression property. Note: * You create the control flow in a package by using the control flow designer. Integration Services includes three types of containers that you can use in a control flow. / Foreach Loop container / For Loop container / Sequence container * For Loop Container The For Loop container defines a repeating control flow in a package. The loop implementation is similar to the For looping structure in programming languages. In each repeat of the loop, the For Loop container evaluates an expression and repeats its workflow until the expression evaluates to False. The For Loop container uses the following elements to define the loop: / An optional initialization expression that assigns values to the loop counters. / An evaluation expression that contains the expression used to test whether the loop should stop or continue. / An optional iteration expression that increments or decrements the loop counter.
