**NEW QUESTION: 1**What accurately classifies a Customer Contact?**A.** Contact Class and Customer Class**B.** Contact Type and Customer Class**C.** Contact Type only**D.** Contact Class only**E.** Contact Type and Contact Class**Answer: E**

**NEW QUESTION: 2**You want to allow all of your company's users to access the Internet without allowing other Web servers to collect the IP addresses of individual users. What two solutions can you use? (Choose two).**A.** Assign unique IP addresses to all users.**B.** Install a Web content filter to hide users' local IP addresses.**C.** Configure a proxy server to hide users' local IP addresses.**D.** Configure a firewall to use Port Address Translation.**E.** Assign the same IP address to all users.**Answer: C, D****Explanation:**In computer networks, a proxy server is a server (a computer system or an application) that acts as an intermediary for requests from clients seeking resources from other servers.[1] A client connects to the proxy server, requesting some service, such as a file, connection, web page, or other resource available from a different server and the proxy server evaluates the request as a way to simplify and control its complexity. Proxies were invented to add structure and encapsulation to distributed systems.[2] Today, most proxies are web proxies, facilitating access to content on the World Wide Web and providing anonymity.Source:[https://en.wikipedia.org/wiki/Proxy\\_server](https://en.wikipedia.org/wiki/Proxy_server)Port Address Translation (PAT) is a subset of NAT, and it is still swapping out the source IP address as traffic goes through the NAT/PAT device, except with PAT everyone does not get their own unique translated address. Instead, the PAT device keeps track of individual sessions based on port numbers and other unique identifiers, and then forwards all packets using a single source IP address, which is shared. This is often referred to as NAT with overload; we are hiding multiple IP addresses on a single global address.Source:Cisco Official Certification Guide, Port Address Translation, p.368

**NEW QUESTION: 3** Which of the following are NOT true with regard to fencing in an environment where OCFS2 is managed by Pacemaker? (Select THREE false statements)  
**A.** OCFS2 fencing cannot be controlled with Pacemaker STONITH.  
**B.** With the default settings, quorum is needed in the cluster to run OCFS2.  
**C.** OCFS2 uses fencing based on the split brain algorithm.  
**D.** OCFS2 fencing can be adjusted or tuned through editing its configuration file.  
**E.** OCFS2 handles its own fencing.  
**Answer: A,C,D**
