NEW QUESTION: 1Your CRM system has an order that includes new broadband service order items to be provisioned and existing mobile service order items to be terminated in the network. Before sending this order for fulfillment, the customer requirements specify that the CRM system should send the same order items to the Order Management System to check whether it is feasible to fulfill the need. Which entity in OSM would you use to differentiate between the orchestration plans that should be executed for each of these two (fulfill and check) orders?
A. Order Recognition Rules
B. Order item action code property
C. Order Component Specifications
D. Orchestration Sequences
E. Fulfillment Modes
Answer: C

NEW QUESTION: 2Which spanning-tree enhancement avoids the learning and listening states and immediately places ports in the forwarding state?
A. PortFast
B. BPDUfilter
C. BPDUguard
D. Backbonefast
Answer: A
Explanation: Explanation PortFast Spanning Tree Portfast causes layer 2 switch interfaces to enter forwarding state immediately, bypassing the listening and learning states. It should be used on ports connected directly to end hosts like servers or workstations. Note: If portfast isn't enabled, DHCP timeouts can occur while STP converges, causing more problems.

NEW QUESTION: 3DRAG DROP You are helping your customer perform a side-by-side migration from Microsoft Lync Server 2010 to Skype for Business Server 2015. The customer moves a batch of users to Skype for Business Server 2015. One user reports that when she escalates an instant messaging conversation to an Audio/Video conference with her colleague who is on Lync Server 2010, audio and video quality become irregular. She also reports that the network signal strength display bars change from green to orange to red. Users who are on Lync Server 2010 do not report any problems with audio or video quality. The Skype for Business user reports that after a few minutes, everything starts working fine. You discover that user is connected to a home Wi-Fi connection. You start a Lync 2010 client on a test computer and sign in with a Lync Server 2010 test user account. You start a Skype for Business Server client on a second test computer and sign in with a Skype for Business Server 2015 test user account. You collect the following information: log files from each client events from each client log files from

both Front End Server pool events from the Skype for Business Server 2015 pool Network analyzer data from the Edge Server Network analyzer data from the test computer that has Skype for Business Server You need to analyze the logs and packet data to diagnose the problem. Which three steps should you perform in sequence? To answer, move the appropriate three actions from the list of actions to the answer area and arrange them in the correct order. Select and Place: **Answer:** Explanation:
