NEW QUESTION: 1 Oracle HCL for certified Joint Support with Nutanix has Oracle Linux and Oracle VM via iSCSI listed. What Nutanix feature is used by this certified Configuration. **A. ABSB. ACSC. OSSD. AFS****Answer: A**

NEW QUESTION: 2

ビルド/購入の決定に情報セキュリティ要件を含めないと、次のことが必要になる可能性があります。**A. 企業標準に準拠した商用製品。B. より厳格なソースプログラミング標準。C. 運用環境での制御の補正。D. 運用プラットフォームのセキュリティスキャン****Answer: C**

NEW QUESTION: 3 Which two statements are true about a unified ISSU? (Choose two.) **A. It is only supported on platforms with redundant control planes. B. It is only supported on platforms with redundant power supplies. C. It requires that graceful Routing Engine switchover be enabled. D. It requires that Bidirectional Forwarding Detection be disabled.****Answer: A, C**

Explanation: B: Recent development work by many router vendors has focused on an effort to provide hitless control plane switchovers, which means keeping the control plane states in sync between the active and standby control planes prior to a switchover. Many consider this capability to be a prerequisite to delivering ISSU. Hitless control plane switch overs are usually implemented using the same version of code on both active and standby control plane components. However, ISSU design additionally requires different software versions running on active and standby control plane components. D: Unified ISSU is supported only on dual Routing Engine platforms. In addition, the graceful Routing Engine switchover (GRES) and nonstop active routing (NSR) must be enabled. References:

NEW QUESTION: 4 One of the elements included in the economic order quantity (EOQ) formula is: **A. Yearly demand. B. Selling price of item. C. Lead time for delivery. D. Safety stock.****Answer: A**

Explanation: The basic EOQ formula is used to minimize the total of inventory carrying and ordering costs. The basic EOQ equals the square root of a fraction consisting of a numerator equal to the product of twice the unit periodic demand and the variable cost per order and a denominator equal to the unit periodic carrying cost. Using an EOQ analysis assuming a constant demand, it is determined that the optimal order quantity is 2,500. The company

desires a safety stock of 500 units. A five-day lead time is needed for delivery. Annual inventory holding costs equal 25% of the average inventory level. It costs the company U \$4 per unit to buy the product, which it sells for U \$. It costs the company U \$150 to place a detailed order, and the monthly demand for the product is 4,000 units.
