NEW QUESTION: 1Scenario: A Citrix Engineer needs to complete the installation and setup of a new Citrix Workspace Environment Management (WEM) infrastructure.As one of the final steps, the engineer needs to point the Administration Console to the existing Citrix Licensing Server. Which step should the engineer take to complete this task?**A.** Select the 'About' tab in the Administration Console ribbon, click 'Configure License server', and then enter the Citrix License Server details in the License server name field.**B.** Select the 'Home' tab in the Administration Console ribbon, click 'Advanced Settings' and then enter the Citrix License Server details in the License server name field.**C.** Select the 'Home' tab in the Administration Console ribbon, click 'Configure License server' and then enter the Citrix License Server details in the License server name field.**D.** No steps are necessary as Licensing is configured during the installation and setup process.**Answer: A**Explanation:Explanation/Reference:Reference: <https://docs.citrix.com/en-us/workspace-environment-management/4-3/install-and-configure/infrastructure-services.html>

NEW QUESTION: 2You need to restore some files from a file system. The file system was backed up from a snapshot. Which command will correctly restore these files?**A.** snapstore -i **B.** fssnap -i**C.** ufsrestore -i**D.** fssnap -r**Answer: C**

NEW QUESTION: 3A user is deploying a Cisco IPS appliance in a data center to mitigate most attacks, including atomic attacks. Which two modes does Cisco recommend using to configure for this? (Choose two.)**A.** transparent mode**B.** promiscuous mode**C.** EtherChannel load balancing**D.** VLAN pair**E.** interface pair**Answer: C,D**

NEW QUESTION: 4A company is using AWS for an application. The Development team must automate its deployments. The team has set up an AWS CodePipeline to deploy the application to Amazon EC2 instances by using AWS CodeDeploy after it has been built using the AWS CodeBuild service.The team would like to add automated testing to the pipeline to confirm that the application is healthy before deploying it to the next stage of the pipeline using the same code. The team requires a manual approval action before the application is deployed, even if the test is successful. The testing and approval must be accomplished at the lowest costs, using the simplest management solution.Which solution will meet these requirements?**A.** Add a manual approval action after the last deploy action of the pipeline. Use Amazon SNS to inform

the team of the stage being triggered. Next, add a test action using CodeBuild to do the required tests. At the end of the pipeline, add a deploy action to deploy the application to the next stage. **B.** Add a test action after the last deployment action. Use a Jenkins server on Amazon EC2 to do the required tests and mark the action as successful if the tests pass. Create a manual approval action that uses Amazon SQS to notify the team and add a deploy action to deploy the application to the next stage. **C.** Add a test action after the last deploy action of the pipeline. Configure the action to use CodeBuild to perform the required tests. If these tests are successful, mark the action as successful. Add a manual approval action that uses Amazon SNS to notify the team, and add a deploy action to deploy the application to the next stage. **D.** Create a new pipeline that uses a source action that gets the code from the same repository as the first pipeline. Add a deploy action to deploy the code to a test environment. Use a test action using AWS Lambda to test the deployment. Add a manual approval action by using Amazon SNS to notify the team, and add a deploy action to deploy the application to the next stage. **Answer: A** Explanation:

<https://docs.aws.amazon.com/codepipeline/latest/userguide/reference-pipeline-structure.html>
