E. Encrypted payroll data was successfully decrypted by the attacker
F. A root user performed an injection attack via kernel module
Answer: A,D

NEW QUESTION: 2 Which two of the following examples best describe the challenges that customers face in today's networks? (Choose two.)
A. How do we control energy consumption of devices owned by employees?
B. How can we consolidate different datacenters?
C. Which type of firewall should we deploy?
D. How can we support telepresence?
Answer: B,D

NEW QUESTION: 3 A Developer has created a software package to be deployed on multiple EC2 instances using IAM roles. What actions could be performed to verify IAM access to get records from Amazon Kinesis Streams? (Select TWO.)
A. Perform a get action using the --dry-run argument.
B. Validate the IAM role policy with the IAM policy simulator.
C. Use the AWS CLI to retrieve the IAM group.
D. Query Amazon EC2 metadata for in-line IAM policies.
E. Request a token from AWS STS, and perform a describe action.
Answer: A,B
Explanation: Explanation Refer AWS documentation - EC2 API & IAM Testing Policies
DryRun Checks whether you have the required permissions for the action, without actually making the request. If you have the required permissions, the request returns DryRunOperation; otherwise, it returns UnauthorizedOperation.
With the IAM policy simulator, you can test and troubleshoot IAM and resource-based policies in the following ways:
* Test policies that are attached to IAM users, groups, or roles in your AWS account. If more than one policy is attached to the user, group, or role, you can test all the policies, or select individual policies to test. You can test which actions are allowed or denied by the selected policies for specific resources.
* Test policies that are attached to AWS resources, such as Amazon S3 buckets, Amazon SQS queues, Amazon SNS topics, or Amazon Glacier vaults.
* If your AWS account is a member of an AWS Organization, then you can test the impact of organization control policies on your IAM policies and resource policies.
* Test new policies that are not yet attached to a user, group, or role by typing or copying them into the simulator. These are used only in the simulation and are not saved. Note: you cannot type or copy a resource-based policy into the simulator. To use a resource-based policy in the simulator, you must include the resource in the simulation and select the check box to include that resource's policy in the simulation.
* Test the policies with selected services, actions, and resources. For example, you can test to ensure that your policy allows an entity to perform the CreateBucket, and DeleteBucket actions in the Amazon S3 service on a specific bucket.
* Simulate real-world scenarios by providing context keys, such as an IP address or date, that are included in Condition elements in the policies being tested.
* Identify which specific statement in a policy results in allowing or denying access to a particular resource or action.
