NEW QUESTION: 2What is the appropriate sequence for fitness testing?
A. Body composition, cardiorespiratory endurance, muscular fitness, flexibility
B. Flexibility, cardiorespiratory endurance, muscular fitness, body composition
C. Cardiorespiratory endurance, flexibility, muscular fitness, body composition
D. Body composition, flexibility, cardiorespiratory endurance, muscular fitness
Answer: A

NEW QUESTION: 3Das Netzwerk enthält eine Active Directory-Domäne mit dem Namen contoso.com. Die Domäne enthält die Server, die wie in der folgenden Tabelle gezeigt konfiguriert sind. Auf allen Servern wird Windows Server 2016 ausgeführt. Auf allen Clientcomputern wird Windows 10 ausgeführt und sie sind Domänenmitglieder. Alle Laptops werden mithilfe der BitLocker-Laufwerkverschlüsselung (BitLocker) geschützt. Sie haben eine Organisationseinheit mit dem Namen OU1, die die Computerkonten von Anwendungsservern enthält. Eine Organisationseinheit mit dem Namen OU2 enthält die Computerkonten der Computer in der Marketingabteilung. Ein Gruppenrichtlinienobjekt mit dem Namen GP1 ist mit OU1 verknüpft. Ein GPO mit dem Namen GP2 ist mit OU2 verknüpft. Alle Computer erhalten Updates von Server1. Sie erstellen eine Aktualisierungsregel mit dem Namen Update1. Sie müssen ein EFS-Datenwiederherstellungszertifikat (Encrypting File System) erstellen und das Zertifikat dann als EFS-Datenwiederherstellungsagenten auf Server5 hinzufügen. Was solltest du auf Server5 verwenden? Wählen Sie zum Beantworten die entsprechenden Optionen im Antwortbereich aus.
Answer: Explanation:Explanation:

NEW QUESTION: 4What is the purpose of the RMAN recovery catalog? (Choose all that apply.)

A. It provides a means of storing all RMAN backup sets physically in an Oracle database server.

B. It provides a convenient, optional, repository of backup- and recovery-related metadata.**C.** It provides the ability to store RMAN scripts for global use by any database that has access to the repository.**D.** It must be used because all RMAN-related backup and recovery metadata

information is contained in it.**E.** It provides the ability to store backup records for more than a year.**Answer: B,C,E**Explanation:Explanation/Reference:Explanation:A recovery catalog is a database schema used by RMAN to store metadata about one or more Oracle databases.

Typically, you store the catalog in a dedicated database. A recovery catalog provides the following benefits:A recovery catalog creates redundancy for the RMAN repository stored in the control file of each target database. The recovery catalog serves as a secondary metadata repository. If the target control file and all backups are lost, then the RMAN metadata still exists in the recovery catalog.A recovery catalog centralizes metadata for all your target databases. Storing the metadata in a single place makes reporting and administration tasks easier to perform.A recovery catalog can store metadata history much longer than the control file. This capability is useful if you must do a recovery that goes further back in time than the history in the control file. The added complexity of managing a recovery catalog database can be offset by the convenience of having the extended backup history available. Some RMAN features function only when you use a recovery catalog. For example, you can store RMAN scripts in a recovery catalog. The chief advantage of a stored script is that it is available to any RMAN client that can connect to the target database and recovery catalog. Command files are only available if the RMAN client has access to the file system on which they are stored.A recovery catalog is required when you use RMAN in a Data Guard environment. By storing backup metadata for all primary and standby databases, the catalog enables you to offload backup tasks to one standby database while enabling you to restore backups on other databases in the environment.
