#### **NEW QUESTION: 4**

分散アプリケーションを開発していて、特定のJSONコンテンツを常に返すパスへの呼び出しが必要で、以下のAPIデプロイメント仕様でOracle Cloud Infrastructure API Gatewayをデプロイします。タイプの正しい値は何ですか? **A.** HTTP\_BACKEND **B.** CONSTANT\_BACKEND **C.** STOCK\_RESPONSE\_BACKEND **D.** JSON\_BACKEND **Answer: C**

Explanation: Explanation Adding Stock Responses as an API Gateway Back End: You'll often want to verify that an API has been successfully deployed on an API gateway without having to set up an actual back-end service. One approach is to define a route in the API deployment specification that has a path to a 'dummy' back end. On receiving a request to that path, the API gateway itself acts as the back end and returns a stock response you've specified. Equally, there are some situations in a production deployment where you'll want a particular path for a route to consistently return the same stock response without sending a request to a back end. For example, when you want a call to a path to always return a specific HTTP status code in the response. Using the API Gateway service, you can define a path to a stock response back end that always returns the same: HTTP status code HTTP header fields (name-value pairs) content in the body of the response "type": "STOCK\_RESPONSE\_BACKEND" indicates that the API gateway itself will act as the back end and return the stock response you define (the status code, the header fields and the body content).
