Maybe you are the first time to buy our **Certificate 350-401 Exam** Implementing Cisco Enterprise Network Core Technologies (350-401 ENCOR) pdf vce dumps, How can you resist such fantastic products?

NEW QUESTION: 1Azure Webアプリを開発しています。

Webアプリに対してTLS相互認証を構成します。

Webアプリでクライアント証明書を検証する必要があります。回答するには、回答領域で適切なオプションを選択します。注：それぞれ正しい選択は1ポイントの価値があります。**Answer:**

Explanation:Explanation:Accessing the client certificate from App Service.If you are using ASP.NET and configure your app to use client certificate authentication, the certificate will be available through the HttpRequest.ClientCertificate property. For other application stacks, the client cert will be available in your app through a base64 encoded value in the "X-ARR-ClientCert" request header. Your application can create a certificate from this value and then use it for authentication and authorization purposes in your application.References: <https://docs.microsoft.com/en-us/azure/app-service/app-service-web-configure-tls-mutual-auth>

NEW QUESTION: 2A definition of an attribute on a custom component. The attribute tag can only be a child of a component tag.Note that you cannot define attributes with names like id or rendered. These attributes are automatically created for all custom component definitions.**A.** apex:message**B.** apex:include**C.** apex:insert**D.** apex:attribute**Answer: D**

NEW QUESTION: 3Sandra is conducting a penetration test for XYZ.com. She knows that XYZ.com is using wireless networking for some of the offices in the building right down the street. Through social engineering she discovers that they are using 802.11g. Sandra knows that 802.11g uses the same 2.4GHz frequency range as 802.11b. Using NetStumbler and her 802.11b wireless NIC, Sandra drives over to the building to map the wireless networks. However, even though she repositions herself around the building several times, Sandra is not able to detect a single AP.What do you think is the reason behind this?**A.** The access points probably have WEP enabled so they cannot be detected.**B.** 802.11g uses OFDM while 802.11b uses DSSS so despite the same frequency and 802.11b card cannot see an 802.11g signal.**C.** Sandra must be doing something wrong,as there is no reason for her to not see the signals.**D.** Netstumbler does not work against 802.11g.**E.** The access points probably have disabled broadcasting of the SSID so they cannot be detected.**F.** You can only pick up 802.11g signals with 802.11a wireless cards.

Answer: D
