NEW QUESTION: 1Answer: Explanation:Explanation

NEW QUESTION: 2Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.Your network contains an on-premises Active Directory domain. The domain contains 2,000 computers that run Windows 8.1 and have applications installed as shown in the following table.You enroll all the computers in Upgrade Readiness.You need to ensure that App1 and App2 have an UpgradeDecision status of Ready to upgrade.Solution: You set the importance status of App2 to Low install count.Does this meet the goal?**A. Yes****B. No**Answer: AExplanation:ExplanationIf an app is installed on less than 2% of the targeted devices, it's marked Low install count. Two percent is the default value. You can adjust the threshold in the readiness settings from 0% to 10%. Desktop Analytics automatically marks these apps as Ready to upgrade.Reference: <https://docs.microsoft.com/en-us/configmgr/desktop-analytics/about-deployment-plans>

NEW QUESTION: 3A DBA has notified the storage administrator that a well-established, long-running database server is experiencing delays writing to /tempdb, where log files are stored. Which of the following should the administrator look at to help determine root cause? (Select TWO).**A. perfmon****B. Read queue length****C. Write queue length****D. netstat****E. Replication status**Answer: A,C
