The unit price uses the following pattern: #####.##.- You observe that for many records, the unit price portion of the ProductCode column contains values.- The RegionCode column contains NULL for some records.- Sales data is only recorded for sales representatives.You are developing a series of reports and procedures to support the business. The report uses SaleYear, SaleQuarter, and SaleMonth as a hierarchy. The result set must not contain a grand total or cross-tabulation aggregate rows. In addition, the unit price must contain a comma every three digits to the left of the decimal point, and must display two digits to the left of the decimal point. The stored procedure must not throw errors, even if the product code contains invalid data. End of Repeated Scenario You need to create the query for the Sales Managers report. Which four Transact-SQL segments should you use to develop the solution? To answer, move the appropriate Transact-SQL segments from the list of Transact-SQL segments to the answer area and arrange them in the correct order. **Answer:** Explanation: Explanation: From scenario: Sales Manager report: This report lists each sales manager and the total sales amount for all employees that report to the sales manager. Box 1:..WHERE Title='Sales representative' The valid values for the Title column are Sales Representative manager, and CEO. First we define the CTE expression. Note: A common table expression (CTE) can be thought of as a temporary result set that is defined within the execution scope of a single SELECT, INSERT, UPDATE, DELETE, or CREATE VIEW statement. A CTE is similar to a derived table in that it is not stored as an object and lasts only for the duration of the query. Unlike a derived table, a CTE can be self-referencing and can be referenced multiple times in the same query. Box 2: Use the CTE expression one time. Box 3: UNION Box 4: Use the CTE expression a second time.
