組織は従来のPBXに接続するためのIPゲートウェイを使用するように構成されています。

管理者は最近、いくつかの設定変更を実施します。

**Explanation:** Use the Test-UMConnectivity cmdlet to test the operation of a Mailbox server computer running the Microsoft Exchange Unified Messaging service. Two diagnostic tests are designed to test the operation of the Microsoft Exchange Server 2013 Mailbox server software (mode 1) and the operation of the whole system that includes the connected telephony components (mode 2). The Test-UMConnectivity cmdlet can be used to test the operation of a Mailbox server and related connected telephony equipment. When you run this cmdlet and include the UMIPGateway parameter, the Mailbox server tests the full end-to-end operation of the Unified Messaging system. This test includes the telephony components connected to the Mailbox server, such as IP gateways, Private Branch eXchanges (PBXs), and cabling. If the UMIPGateway parameter isn't specified, the Mailbox server tests only the operation of the Unified Messaging components that are installed and configured on the server.**Incorrect: Not B:**
