**NEW QUESTION: 4** What is the purpose of Priority Delta in VRRP?  
**A.** When a box up, Effective Priority = Priority + Priority Delta  
**B.** When a box fail, Effective Priority = Priority - Priority Delta  
**C.** When an Interface fail, Effective Priority = Priority - Priority Delta  
**D.** When an Interface is up, Effective Priority = Priority + Priority Delta  
**Answer: C**  
Explanation: Explanation/Reference: Explanation: Each instance of VRRP running on a supported interface may monitor the link state of other interfaces. The monitored interfaces do not have to be running VRRP. If a monitored interface loses its link state, then VRRP will decrement its priority over a VRID by the specified delta value and then will send out a new VRRP HELLO packet. If the new effective priority is less than the priority a backup platform has, then the backup platform will begin to send out its own HELLO packet. Once the master sees this packet with a priority greater than its own, then it releases the VIP.
