The redundancy levels are: \*External redundancyASM does not provide mirroring redundancy and relies on the storage system to provide RAID functionality. Any write error cause a forced dismount of the disk group. All disks must be located to successfully mount the disk group. \*Normal redundancyASM provides two-way mirroring. By default all files are mirrored so that there are two copies of every data extent. A loss of one ASM disk is tolerated. \*High redundancyASM provides triple mirroring by default. A loss of two ASM disks in different failure groups is tolerated. Reference: Oracle Database Storage Administrator's Guide, ASM Mirroring and Disk Group Redundancy
