The network contains an Active Directory forest named fabrikam.com. The company plans to deploy an Exchange Server 2016 organization that will contain the servers configured as shown in the following table. The servers will be configured in a single database availability group (DAG). Datacenter Activation Coordination (DAC) mode will be enabled for the DAG. All inbound email from the Internet will be routed through EX5. You need to recommend a solution to ensure that users will continue to receive email messages if the Miami data center fails. Which two actions should you include in the recommendation? Each correct answer presents part of the solution. **A.** Configure a host (A) record named mx.fabrikam.com and point mx.fabrikam.com to the IP address of EX5.
