If you say no for these questions, [C_THR94_2311 Vce Torrent](#) I can tell you that we are the best provider for you.

NEW QUESTION: 1 You are developing a data flow transformation to merge two data sources. One source contains product data and the other source contains data about the country in which the product was manufactured. Both data sources contain a two-character CountryCode column and both use SQL Server. Both data sources contain an ORDER BY clause to sort the data by the CountryCode column in ascending order. You use a Merge Join transformation to join the data. You need to ensure that the Merge Join transformation works correctly without additional transformations. What should you do? (Each answer presents a part of the solution. Choose all that apply.)
A. Set the MaxBuffersPerInput property on the Merge Join transformation to 2.
B. set the ValidateExternalMetaData property on the Merge Join transformation to True.
C. set the IsSorted property on both data sources.
D. set the appropriate SortKeyPosition properties on the data sources.
Answer: C,D
