NEW QUESTION: 1What must be done to destroy data stored on "write once read many" (WORM) media?**A.** The media must be physically destroyed.**B.** The data must be made inaccessible by encryption.**C.** The media must be reformatted.**D.** The erase function must be used to remove all data.**Answer: A**

NEW QUESTION: 2What happens when you hold the Shift key while opening an image from Camera Raw into Photoshop?**A.** The image opens with no changes**B.** The image opens as a Smart Object**C.** The image opens as a layer**D.** The image opens as a copy**Answer: B**

NEW QUESTION: 3Your company has several websites that use a company logo image. You use Azure Content Delivery Network (CDN) to store the static image.You need to determine the correct process of how the CDN and the Point of Presence (POP) server will distribute the image and list the items in the correct order.In which order do the actions occur? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Answer: Explanation:ExplanationStep 1: A user requests the image..A user requests a file (also called an asset) by using a URL with a special domain name, such as <endpoint name>.azureedge.net. This name can be an endpoint hostname or a custom domain. The DNS routes the request to the best performing POP location, which is usually the POP that is geographically closest to the user.Step 2: If no edge servers in the POP have the..If no edge servers in the POP have the file in their cache, the POP requests the file from the origin server. The origin server can be an Azure Web App, Azure Cloud Service, Azure Storage account, or any publicly accessible web server.Step 3: The origin server returns the..The origin server returns the file to an edge server in the POP.An edge server in the POP caches the file and returns the file to the original requestor (Alice). The file remains cached on the edge server in the POP until the time-to-live (TTL) specified by its HTTP headers expires. If the origin server didn't specify a TTL, the default TTL is seven days.Step 4: Subsequent requests for..Additional users can then request the same file by using the same URL that the original user used, and can also be directed to the same POP.If the TTL for the file hasn't expired, the POP edge server returns the file directly from the cache. This process results in a faster, more responsive user experience. References:<https://docs.microsoft.com/en-us/azure/cdn/cdn-overview>
