Valid Estruturit Cloud-Digital-Leader dumps and PDF here: Practice for your Cloud-Digital-Leader exam with the help of Estruturit, Estruturit is the best site for providing online preparation material for Cloud-Digital-Leader exam.

NEW QUESTION: 1Your multitenant container database (CDB) contains some pluggable databases (PDBs), you execute the following command in the root container: Which two statements are true? (Choose two.)
A. The command will create a user in the root container only because the container clause is not used.
B. Schema objects owned by the C##A_ADMIN common user can be shared across all PDBs.
C. The command will, create a common user whose description is contained in the root and each PDB.
D. The schema for the common user C##A_ADMIN can be different in each container.
E. The C##A_ADMIN user will be able to use the TEMP_TS temporary tablespace only in root.
Answer: C,D

NEW QUESTION: 2Your network contains two Hyper-V servers named Server1 and Server2. Server1 has Windows 2012 R2 installed. Server2 has Windows Server 2016 installed. You perform a live migration of a virtual machine named VM1 from Server1 to Server2. You need to create a production checkpoint for VM1 on Server2. What three Windows PowerShell cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of actions to the answer area and arrange them in the correct order.
Answer: Explanation: Explanation We need to update the VM Version to enable the Production Checkpoints feature.
Step 1: Stop-VM The virtual machine should be shut down before upgrading it.
Step 2: Update-VMVersion To upgrade the virtual machine configuration version by using Windows PowerShell, use the Update-VMVersion cmdlet.
Step 3: CheckPoint-VM The Checkpoint-VM cmdlet creates a checkpoint of a virtual machine.
Note: There is no Upgrade-VMVersion cmdlet

NEW QUESTION: 3You administer a Microsoft SQL Server database. You want to import data from a text file to the database. You need to ensure that the following requirements are met: Data import is performed by using a stored procedure. Data is loaded as a unit and is minimally logged. Which data import command and recovery model should you choose? (To answer, drag the appropriate data import command or recovery model to the appropriate location or locations in the answer area. Each data import command or recovery model may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)
Select and Place:
Answer: Explanation:
