**NEW QUESTION: 1**You administer a Microsoft SQL Server 2014 database named Contoso on a server named Server01.You need to be notified immediately when fatal errors occur on Server01.What should you create?**A.** An Alert**B.** A Resource Pool**C.** A Database Audit Specification**D.** A Policy**E.** An Extended Event session**F.** A Server Audit Specification**G.** A SQL Profiler Trace**Answer: A****Explanation:**SQL Server has alerts that get more important based on the severity of the alert. Anything of severity 16 or below tends to refer to the database and deals with issues that are tied to syntax errors, violations of foreign keys, etc. While those errors are typically important, they don't refer to anything with regards to overall health of the SQL Server. Alerts 17 through 25 do. Those are the ones your health checks are probably firing on.

You are developing an application that applies a set of governance policies for Proseware's internal services, external services, and applications. The application will also provide a shared library for common functionality.RequirementsPolicy

serviceYou develop and deploy a stateful ASP.NET Core 2.1 web application named Policy service to an Azure App Service Web App. The application reacts to events from Azure Event Grid and performs policy actions based on those events. The application must include the Event Grid Event ID field in all Application Insights telemetry. Policy service must use Application Insights to automatically scale with the number of policy actions that it is performing. Policies Log policyAll Azure App Service Web Apps must write logs to Azure Blob storage. All log files should be saved to a container named logdrop. Logs must remain in the container for 15 days. Authentication eventsAuthentication events are used to monitor users signing in and signing out. All authentication events must be processed by Policy service. Sign outs must be processed as quickly as possible. PolicylibYou have a shared library named PolicyLib that contains functionality common to all ASP.NET Core web services and applications. The Policy Lib library must\* Exclude non-user actions from Application Insights telemetry.\* Provide methods that allow a web service to scale itself.\* Ensure that scaling actions do not disrupt application usage. OtherAnomaly detection serviceYou have an anomaly detection service that analyzes log information for anomalies. It is implemented as an Azure as a web service. If an anomaly is detected, an Azure Function that emails administrators is called by using an HTTP WebHook. Health monitoringAll web applications and services have health monitoring at the /health service endpoint. IssuesPolicy lossWhen you deploy Policy service, policies may not be applied if they were in the process of being applied during the deployment. Performance issue When under heavy load, the anomaly detection service undergoes slowdowns and rejects connections. Notification latencyUsers report that anomaly detection emails can sometimes arrive several minutes after an anomaly is detected.
