NEW QUESTION: 4 For the next 2 years, a lease is estimated to have an operating net cash inflow of \$7,500 per annum, before adjusting for \$5,000 per annum tax basis lease amortization, and a 40% tax rate. The present value of an ordinary annuity of \$1 per year at 10% for 2 years is \$1.74. What is the lease's after-tax present value using a 10% discount factor?
A. \$9,570
B. \$4,350
C. \$11,310
D. \$2,610
Answer: C
Explanation: Choice "d" is correct. Present value is based on the cash flows of an activity. Amortization is a non-cash expense that is considered only for its tax shield; therefore, the only relevant amounts are the \$7,500 operating net cash inflow and the tax paid. After-tax PV \$11,310
Choice "a" is incorrect. Amortization expense of \$5,000 is a non-cash expense and is not used to compute after-tax present value. It is used to determine the cash paid for taxes.
Choice "b" is incorrect. Amortization is a non-cash expense. It is not considered in the calculation, except to the extent it creates a tax shield. The tax shield reduces the amount of taxes paid out by the company.
Choice "c" is incorrect. Present value is based on the cash flows of an activity. Amortization is a non-cash expense that is considered only for its tax shield; therefore, the only relevant amounts are the \$7,500 operating net cash inflow and the tax paid.
