NEW QUESTION: 1Your network contains two standalone servers named Server1 and Server2 that have Active Directory Lightweight Directory Services (AD LDS) installed. Server1 has an AD LDS instance. You need to ensure that you can replicate the instance from Server1 to Server2. What should you do on both servers?
A. Register the service location (SRV) resource records.
B. Import the MS-User.ldf file.
C. Obtain a server certificate.
D. Create a service user account for AD LDS.
Answer: D

NEW QUESTION: 2Welche der folgenden DNS-Eintragstypen können zur Begrenzung von Spam beitragen?
A. SRV
B. A
C. SPF
D. MX
Answer: C

NEW QUESTION: 3Which backup method does not reset the archive bit on files that are backed up?
A. Full backup method
B. Differential backup method
C. Additive backup method
D. Incremental backup method
Answer: B
Explanation: The differential backup method only copies files that have changed since the last full backup was performed. It is additive in the fact that it does not reset the archive bit so all changed or added files are backed up in every differential backup until the next full backup. The "additive backup method" is not a common backup method.
