**NEW QUESTION: 2** An administrator wants a new Palo Alto Networks NGFW to obtain automatic application updates daily, so it is configured to use a scheduler for the application database. Unfortunately, they required the management network to be isolated so that it cannot reach the internet. Which configuration will enable the firewall to download and install application updates automatically?**A. Configure a security policy rule to allow all traffic to and from the update servers. B. Download and install application updates cannot be done automatically if the MGT port cannot reach the internet. C. Configure a service route for Palo Alto networks services that uses a dataplane interface that can route traffic to the internet, and create a security policy rule to allow the traffic from that interface to the update servers if necessary. D. Configure a Policy Based Forwarding policy rule for the update server IP address so that traffic sourced from the management interface destined for the update servers goes out of the interface acting as your internet connection.****Answer: C****Explanation:** "By default, the firewall uses management interface to communicate to various servers including DNS, Email, Palo Alto Updates, User-ID agent, Syslog, Panorama etc. Service routes are used so that the communication between the firewall and servers go through the dataplane."
