**NEW QUESTION: 1** Which two statements about the protected ports feature and the private VLAN feature are true? (Choose two.)  
**A.** The protected ports feature can isolate traffic between two "protected" ports on different switches.  
**B.** The private VLAN feature prevents interhost communication within a VLAN across one or more switches.  
**C.** The protected ports feature is limited to the local switch.  
**D.** The private VLAN feature is limited to the local switch.  
**Answer: B,C**  
**Explanation:** Protected Ports (PVLAN Edge) In some network environments, there is a requirement for no traffic to be seen or forwarded between host(s) on the same LAN segment, thereby preventing interhost communications. The PVLAN edge feature provisions this isolation by creating a firewall-like barrier, thereby blocking any unicast, broadcast, or multicast traffic among the protected ports on the switch. Note that the significance of the protected port feature is limited to the local switch, and there is no provision in the PVLAN edge feature to isolate traffic between two "protected" ports located on different switches. For this purpose, the PVLAN feature can be used. Reference:

The threats and vulnerabilities are then evaluated in a risk assessment and the necessary actions taken to resolve and vulnerabilities. A vulnerability scan scans for known weaknesses such as missing patches or security updates. A vulnerability scan is the automated process of proactively identifying security vulnerabilities of computing systems in a network in order to determine if and where a system can be exploited and/or threatened. While public servers are important for communication and data transfer over the Internet, they open the door to potential security breaches by threat agents, such as malicious hackers. Vulnerability scanning employs software that seeks out security flaws based on a database of known flaws, testing systems for the occurrence of these flaws and generating a report of the findings that an individual or an enterprise can use to tighten the network's security.
