An SAP certificate would be you shining **C-ARCIG-2404 New Dumps Book** point and it's also an important element for your employer to evaluate you.

NEW QUESTION: 1 Which term describes a spanning-tree network that has all switch ports in either the blocking or forwarding state? **A.** redundant **B.** provisioned **C.** spanned **D.** converged
Answer: D Explanation: Explanation Spanning Tree Protocol convergence (Layer 2 convergence) happens when bridges and switches have transitioned to either the forwarding or blocking state. When layer 2 is converged, root bridge is elected and all port roles (Root, Designated and Non-Designated) in all switches are selected.

NEW QUESTION: 2 A D-List contains an item called Category Code, where the code is three characters long and represents a region and month, such as E11 for Europe and November. Which type of format should be applied to this item to ensure that only valid codes are entered? **A.** Numeric **B.** Text **C.** D-List **D.** Date **Answer: C**

NEW QUESTION: 3 Which two strategies can you employ to maximize your Business Objects Enterprise system's capacity to process scheduled report instances? (Choose two) **A.** Install all job servers on a machine located close to the production database server machine. **B.** Verify the efficiency of your report objects. **C.** Distribute the processing load through multiple server groups, each including one or more Crystal Reports Page Servers. **D.** Increase the number of Crystal Reports Page Server services that serve requests from the Crystal Reports Cache Server. **Answer: A,B**

NEW QUESTION: 4 Your network consists of one Active Directory domain. All domain controllers run Windows Server 2008 R2. You need to deploy Active Directory Certificate Services on the network to support the following requirements: * Maintain availability if a single server fails. * Delegate the enrollment of certificates for separate groups of users, * Restrict the types of certificates that can be issued by a certificate manager. What should you do? **A.** Deploy two servers that run Windows Server 2008 R2 Enterprise. Configure a failover cluster. Configure a standalone root certification authority (CA). **B.** Deploy two servers that run Windows Server 2008 R2 Standard. Configure a standalone root certification authority (CA) and an enterprise subordinate CA. **C.** Deploy two servers that run Windows Server 2008 R2 Enterprise. Configure an enterprise root certification authority (CA) and a standalone subordinate CA. **D.** Deploy two servers that run Windows Server 2008 R2 Enterprise. Configure a failover cluster. Configure an enterprise certification authority (CA). **Answer: D** Explanation: Failover clusters provide high availability and scalability to many server workloads. These include server applications such as Microsoft Exchange Server, Hyper-V, Microsoft SQL Server, and file servers. The server applications can run on physical servers or virtual machines. The Enterprise Administrator can install Certificate Services to create an enterprise certification authority (CA). Enterprise CAs can issue certificates for purposes such as digital signatures, secure e-mail using S/MIME

(Secure Multipurpose Internet Mail Extensions), authentication to a secure Web server using Secure Sockets Layer (SSL) or Transport Layer Security (TLS), and logging on to a Windows Server 2003 family domain using a smart card.
