**NEW QUESTION: 1** 次の役割のうち、消費者の記録を更新できないものはどれですか？  
A. sn\_customerservice.consumer\_agent  
B. sn\_customerservice\_agent  
C. admin  
D. sn\_customerservice\_manager  
**Answer: B**

**NEW QUESTION: 2** Click to expand each objective. To connect to the Azure portal, type <https://portal.azure.com> in the browser address bar. When you are finished performing all the tasks, click the 'Next' button. Note that you cannot return to the lab once you click the 'Next' button. Scoring occur in the background while you complete the rest of the exam. Overview The following section of the exam is a lab. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design. Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task. Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided. Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab. To start the lab You may start the lab by clicking the Next button. You plan to prevent users from accidentally deleting blob data from Azure. You need to ensure that administrators can recover any blob data that is deleted accidentally from the storagelod8322489 storage account for 14 days after the deletion occurred. What should you do from the Azure portal? **Answer:** Explanation: See explanation below. Explanation Task A: Create a

Recovery Services vault (if a vault already exists skip this task, go to Task B below) A1. From Azure Portal, On the Hub menu, click All services and in the list of resources, type Recovery Services and click Recovery Services vaults.If there are recovery services vaults in the subscription, the vaults are listed.A2. On the Recovery Services vaults menu, click Add.A3. The Recovery Services vault blade opens, prompting you to provide a Name, Subscription, Resource group, and Location Task B. Create a backup goal B1. On the Recovery Services vault blade (for the vault you just created), in the Getting Started section, click Backup, then on the Getting Started with Backup blade, select Backup goal.The Backup Goal blade opens. If the Recovery Services vault has been previously configured, then the Backup Goal blades opens when you click Backup on the Recovery Services vault blade.B2. From the Where is your workload running? drop-down menu, select Azure.B3. From the What do you want to backup? menu, select Blob Storage, and click OK.B4. Finish the Wizard.Task C. create a backup schedule C1. Open the Microsoft Azure Backup agent. You can find it by searching your machine for Microsoft Azure Backup.C2. In the Backup agent's Actions pane, click Schedule Backup to launch the Schedule Backup Wizard.C3. On the Getting started page of the Schedule Backup Wizard, click Next.C4. On the Select Items to Backup page, click Add Items.The Select Items dialog opens.C5. Select Blob Storage you want to protect, and then click OK.C6.In the Select Items to Backup page, click Next.On the Specify Backup Schedule page, specify Schedule a backup every day, and click Next.C7. On the Select Retention Policy page, set it to 14 days, and click Next.C8. Finish the Wizard.References:

**NEW QUESTION: 3A. Option CB. Option AC. Option DD. Option B****Answer: A****Explanation:**An ASP.NET HTTP handler is the process that runs in response to a request that is made to an ASP.NET Web application.ASP.NET maps HTTP requests to HTTP handlers based on a file name extension.Incorrect:Not B: HTTP modules differ from HTTP handlers. An HTTP handler returns a response to a request that is identified by a file name extension or family of file name extensions. In contrast, an HTTP module is invoked for all requests and responses. It subscribes to event notifications in the request pipeline and lets you run code in registered event handlers. References: <https://msdn.microsoft.com/en-us/library/bb398986.aspx>

**NEW QUESTION: 4**What key point should be understood about how flow information in IBM Security QRadar SIEM V7.2.8 is used?**A.** Flow information generates the response that is configured in the custom rule.**B.** Flow information is used to detect threats and other suspicious activity that might be missed if only event information were tracked.**C.** Flow information is actively gathered from the QRadar Event Collector and provides views, reports and alerts to the administrator.**D.** Flow information is sent to QRadar QFlow Collector which normalizes raw log source events.**Answer: B****Explanation:**Explanation
