NEW QUESTION: 1 Fallstudie 1 - Litware inc Bestehende Umgebung
Aktuelles Geschäftsmodell
Das Büro in Los Angeles beschäftigt 500 Entwickler. Die Entwickler arbeiten flexibel zwischen 11:00 und 22:00 Uhr. Litware verfügt über eine Microsoft System Center 2012 R2 Configuration Manager-Bereitstellung. Während der Ermittlung entdeckt das Unternehmen einen Prozess, bei dem Benutzer Bankkontoinformationen seiner Kunden per E-Mail an interne und externe Empfänger senden. Aktuelles Umfeld
Das Netzwerk enthält eine Active Directory-Domäne, die mit Microsoft Azure Active Directory (Azure AD) synchronisiert wird. Die Funktionsebene der Gesamtstruktur und der Domäne ist Windows Server 2012 R2. Auf allen Domänencontrollern wird Windows Server 2012 R2 ausgeführt. Litware verfügt über die in der folgenden Tabelle aufgeführten Computer. Die Entwicklungsabteilung verwendet Projekte in Azure DevOps, um Anwendungen zu erstellen. Die meisten Mitarbeiter in der Verkaufsabteilung sind Bauunternehmer. Jedem Auftragnehmer wird ein Computer zugewiesen, auf dem Windows 10 ausgeführt wird. Am Ende jedes Vertrags wird der Computer einem anderen Auftragnehmer zugewiesen. Derzeit werden die Computer von der IT-Abteilung manuell neu bereitgestellt.
Problemstellungen
Litware identifiziert die folgenden Probleme im Netzwerk:
- Mitarbeiter in der Niederlassung in Los Angeles melden eine langsame Internetleistung, wenn Updates heruntergeladen werden. Die Mitarbeiter berichten auch, dass die Updates bei der Installation häufig erhebliche Ressourcen verbrauchen. Die Update-Einstellungen werden wie in der Updates-Ausstellung gezeigt konfiguriert. (Klicken Sie auf die Schaltfläche Updates.)
- Das Management vermutet, dass der Quellcode für die proprietären Anwendungen in Azure DevOps extern freigegeben wird.
- Das erneute Bereitstellen der Computer der Verkaufsabteilung ist zu zeitaufwändig.
Bedarf
Geschäftsziele
Litware plant den Übergang zur gemeinsamen Verwaltung für alle Windows 10-Computer des Unternehmens. Wenn immer möglich, möchte Litware die Kosten für Hardware und Software minimieren.
Geräteverwaltungsanforderungen
Litware identifiziert die folgenden Geräteverwaltungsanforderungen:
- Verhindern Sie, dass die Mitarbeiter der Verkaufsabteilung E-Mails mit Bankkontoinformationen weiterleiten.
- Stellen Sie sicher, dass auf Microsoft Edge Favorites von allen Computern aus zugegriffen werden kann, auf denen sich die Entwickler anmelden.
- Verhindern Sie, dass Mitarbeiter der Forschungsabteilung patentierte Informationen von vertrauenswürdigen Anwendungen in nicht vertrauenswürdige Anwendungen kopieren.
Technische Anforderungen
Litware legt die folgenden technischen Anforderungen für die geplante Bereitstellung fest:
- Stellen Sie die Computer der Verkaufsabteilung mithilfe von Windows AutoPilot erneut bereit.
- Stellen Sie sicher, dass auf die Projekte in Azure DevOps nur über das Unternehmensnetzwerk zugegriffen

werden kann.- Stellen Sie sicher, dass sich Benutzer mit einer PIN bei den mit Azure AD verbundenen Computern anmelden können. Die PIN muss alle 30 Tage ablaufen.- Stellen Sie bei Verwendung von Windows AutoPilot sicher, dass der Firmenname und das Logo während der Out of Box Experience (OOBE) angezeigt werden.Womit sollten Sie die technischen Anforderungen für Azure DevOps erfüllen?**A.** Ein Gerätekonfigurationsprofil**B.** Bedingter Zugriff **C.** Windows-Informationsschutz (WIP)**D.** Eine App-Schutzrichtlinie**Answer: B****Explanation:**
Erläuterung:
<https://docs.microsoft.com/en-us/azure/devops/organizations/accounts/manage-conditional-access?view=azure-devops>

NEW QUESTION: 2Sie möchten die konzerninterne Anlagenübertragung nur für IFRS buchen. Welche Objekte können Sie in der Umbuchung angeben, um dies zu erreichen? Es gibt 2 richtige Antworten auf diese Frage.**A.** Ledger-Gruppe.**B.** Bewertungsbereich.**C.** Transaktionstyp.**D.** Rechnungslegungsgrundsatz.**Answer: A,D**

NEW QUESTION: 3A standard user named User1 has a computer that runs Windows 7. You need to ensure that User1 can run Windows Easy Transfer. What should you do?**A.** Add User1 to the Administrators group.**B.** Configure User1 to have a complex password.**C.** Copy the support folder from the Windows 7 installation media to the local hard disk drive.**D.** Disable User Account Control (UAC).**Answer: A****Explanation:**Windows Easy Transfer Migration After you have set up Windows Easy Transfer on the source computer, you are ready to perform migration. If you want to migrate only a single user account, you can log on with that account to perform the transfer. If you want to migrate all accounts on the computer, you need to log on with a user account that has Local administrator privileges.To do this, start Windows Easy Transfer, select the transfer method, and then, on the Which Computer Are You Using Now? page, select This Is My Old Computer. If you are using the External Hard Disk or USB storage device method, Windows Easy Transfer will then perform a migration check and provide an estimate of the size of the data you can transfer to the new computer on the source computer. If you are using the Network or Easy Transfer Cable method, you will select items for migration on the destination computer.**NOT** User Account Control (UAC) UAC is a security feature of Windows 7 that informs you when the action that you want to undertake requires an elevation of privileges. If you logged on with a user account that was a member of the local administrators group in previous versions of Microsoft Windows, such as Windows XP, you automatically had administrator-level access at all times. This, by itself, was not a problem because recommended good practice was that people logged on with accounts that were members of the local administrator group only when they needed to do something related to administration. The problem with this is that people tended to use their administrator account as their normal user account. It was convenient for them because they did not have to log off and log on again each time they wanted to do something related to systems administration. Unfortunately, this behavior presented a security problem because any program run by a user logged on with an administrative account runs with the rights and privileges of that user. UAC resolves this problem by allowing a user that is a member of the local Administrators group to run as a standard user most of the time and to briefly elevate their privileges so that they are running as administrators when they attempt to carry out specific administration-related tasks.
