not to advance is to fall back.

**NEW QUESTION: 1**Which of the following helps prevent routing loops?**A.** Split horizon**B.** Routing table**C.** Route summarization**D.** Default gateway**Answer: A****Explanation:**Routing loops occur when the routing tables on the routers are slow to update and a redundant communication cycle is created between routers. Split horizon, which prevents the router from advertising a route back to the other router from which it was learned, can be used to resist routing loops. Poison reverse, also known as split horizon with poison reverse, is also used to resist routing loops.

**NEW QUESTION: 2**Your customer has linked products and dispositions together on their site. On the agent's incident workspace the list of dispositions is not being filtered.Select the two actions that will assist in troubleshooting this issue.
