**NEW QUESTION: 3** **A.** Option B **B.** Option E **C.** Option D **D.** Option A **E.** Option C **Answer: B,C**  
Explanation: Explanation: VRRP Advertisements The virtual router master sends VRRP advertisements to other VRRP routers in the same group. The advertisements communicate the priority and state of the virtual router master. The VRRP advertisements are encapsulated in IP packets and sent to the IP Version 4 multicast address assigned to the VRRP group. The advertisements are sent every second by default; the interval is configurable. Although the VRRP protocol as per RFC 3768 does not support millisecond timers, Cisco routers allow you to configure millisecond timers. You need to manually configure the millisecond timer values on both the primary and the backup routers. The master advertisement value displayed in the show vrrp command output on the backup routers is always 1 second because the packets on the backup routers do not accept millisecond values. You must use millisecond timers where absolutely necessary and with careful consideration and testing. Millisecond values work only under favorable circumstances, and you must be aware that the use of the millisecond timer

values restricts VRRP operation to Cisco devices only.

**NEW QUESTION:** 4S2600 series storage arrays do not support port type ( )  
**A.** SAS expander port  
**B.** FC host ports  
**C.** SAS host ports  
**D.** FC cascade port  
**Answer: D**
