Then you will concentrate on learning our CBAP study materials, You may have some doubts why our CBAP actual test questions have attracted so many customers; the following highlights will give you a reason.

NEW QUESTION: 1George has launched three EC2 instances inside the US-East-1a zone with his AWS account. Ray has launched two EC2 instances in the US-East-1a zone with his AWS account. Which of the below mentioned statements will help George and Ray understand the availability zone (AZ) concept better?
A. All the instances of George and Ray can communicate over a private IP without any cost
B. All the instances of George and Ray can communicate over a private IP with a minimal cost
C. The instances of George and Ray will be running in the same data centre
D. The US-East-1a region of George and Ray can be different availability zones
Answer: D
Explanation: Each AWS region has multiple, isolated locations known as Availability Zones. To ensure that the AWS resources are distributed across the Availability Zones for a region, AWS independently maps the Availability Zones to identifiers for each account. In this case the Availability Zone US-East-1a where George's EC2 instances are running might not be the same location as the US-East-1a zone of Ray's EC2 instances. There is no way for the user to coordinate the Availability Zones between accounts.
